

FortiAnalyzer™ Appliances

Central Logging and Analysis
for Fortinet Solutions

Datasheet

Real-Time Blended Threat Management with Reporting, Logging, Alerting and Content Archiving

Knowledge is Power

To meet the growing demand for Web-enabled applications and new IP-based services, such as multimedia messaging, voice over IP (VoIP), and video applications, enterprise networks are rapidly expanding and dramatically growing in complexity. As a result, monitoring and enforcing acceptable use policies, identifying and blocking new blended security threats, and complying with emerging governmental regulations requires sophisticated logging and reporting capabilities. Both real-time and historical views of network usage and security information are essential for discovering and addressing vulnerabilities across dispersed networks and user groups. The ability to capture network event, usage and content information for forensic purposes, and to comply with governmental regulations regarding privacy and disclosure of security breaches, is absolutely critical. Network and security administrators need a comprehensive set of logging and reporting tools that provide the knowledge required to implement a complete multi-layered security solution.

Solutions for Dynamic Security Management

The FortiAnalyzer family of real-time network logging, analyzing, and reporting systems are a series of dedicated network hardware appliances that securely aggregate log data from Fortinet devices and third-party devices. A full range of log record types may be archived, filtered and mined for compliance or historical analysis purposes. A comprehensive suite of standard graphical reports are built-in to the system, which also offers the flexibility to customize reports to specific needs. FortiAnalyzer solutions also provide advanced security management functions such as: quarantine archiving, event correlation, vulnerability assessments, traffic analysis, and archiving of email, Web access, instant messaging and file transfer content.

Key Solution Features and Benefits

- Network Event Correlation** Allows IT administrators to more quickly identify and react to network security threats across the network.
- Streamlined Graphical Reports** Provides network-wide reporting of events, activities and trends occurring on FortiGate® and third party devices.
- Scalable Performance and Capacity** FortiAnalyzer family models support thousands of FortiGate and FortiClient™ agents.
- Centralized Logging of Multiple Record Types** Including traffic activity, system events, viruses, attacks, Web filtering events, and messaging activity/data.
- Centralized Content Archiving with Centralized Quarantine** Provides reliable archiving of content data, such as email content, IM chat and file transfers, as well as a centralized quarantine repository for infected files.
- Centralized Log Aggregation** Supports flexible deployment scenarios, such as deploying lower cost models in regional offices, and aggregating logs to centralized office.
- Seamless Integration with the Fortinet Product Portfolio** Tight integration maximizes performance and allows FortiAnalyzer resources to be managed from FortiGate or FortiManager™ user interfaces.

FortiAnalyzer-4000A

Knowledge is the Key to Dynamic Security Management

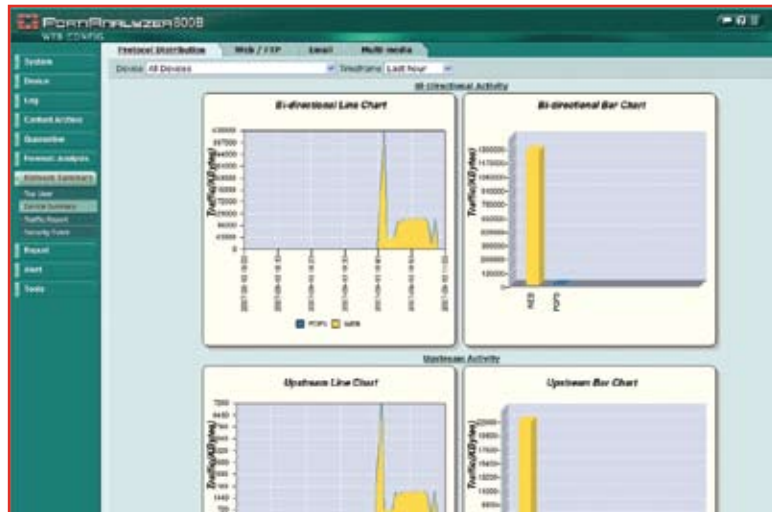

Security threats are becoming much more dynamic with attacks now using multiple vectors to penetrate, then exploit their intended targets. Businesses must immediately recognize new vulnerabilities or attacks and implement protective measures before the damage is done. FortiAnalyzer systems are a critical component of the comprehensive Fortinet security solution, providing enterprise-class logging and reporting features necessary to discover, analyze and mitigate threats. The FortiAnalyzer system's forensic analysis tool enables detailed user activity reports, while the vulnerability assessment tool can automatically discover, inventory and assess the security posture of servers and hosts. Complete the security management solution with a FortiManager system for comprehensive and seamless centralized management for your entire network.

Centralized Logging and Reporting with FortiAnalyzer Solutions— Complete Knowledge and Control

Security Reporting—Security Management

FortiAnalyzer is a centralized solution to the logging and reporting challenges in today's complex and dynamic security environments. Implemented on scalable, high-performance platforms, FortiAnalyzer systems allow security professionals to capture security information from the entire network of Fortinet devices combining the entire range of security threat information, not just the Firewall or intrusion prevention elements, and delivers the information via reports that are easy to configure, understand and use. The FortiAnalyzer dashboard allows administrators to quickly assess the key health metrics of the FortiAnalyzer device and quickly navigate to security information and reports.

Understanding the Dynamic Security Environment

Not only are the security threats more complex in today's business environment, but new regulatory, compliance and legal mandates also require businesses to not only understand activities on their networks but to proactively implement and enforce such regulatory requirements and to be responsible for acceptable use policies. FortiAnalyzer provides hundreds for standard reports as well as the ability to fully customize reports to unique business needs. Reports can be tailored to and delivered in the exact formats needed based on user requirements. Profile-based Administration allows unique access privileges and rights to be assigned to different users based on requirements and needs.

Content Logging & Data Mining

Network-wide log aggregation and archiving is critical to identifying security threats and managing network usage. In addition to in-depth, real-time logging and reporting, FortiAnalyzer enables detailed content logging of user activities and network traffic. Activity can be monitored in real-time or logged, archived and later mined as needed. Activity be tracked by user, protocol, source, destination, etc. and the actual content exchanged in a session can be captured. Not only is content logging critical in order to implement regulatory mandates such as HIPAA and SOX compliance but absolutely required to enforce acceptable use policies and to protect valuable corporate assets and intellectual property.

The image shows the FortiAnalyzer 600B Web Config interface displaying a log archive table. The top navigation bar includes 'System', 'Log', 'Log Report', 'Log Filter', 'Log Search', 'Log Export', 'Log Import', 'Log Backup', 'Log Restore', 'Log Purge', 'Log Settings', 'Log Monitor', 'Log Audit', 'Log Debug', 'Log Test', 'Log Help'. The main content area is a table with columns for 'No.', 'Resolve Host Name', 'Permitted', 'Subj', 'Event', 'URL', 'Method', and 'Size'. The table contains 30 rows of log entries, each representing a network transaction. The interface is clean and professional, with a green and white color scheme.

FortiAnalyzer Models

Feature	FortiAnalyzer-100B	FortiAnalyzer-800B	FortiAnalyzer-2000A	FortiAnalyzer-4000A
Security Hardened Platform.....	Yes	Yes	Yes	Yes
Number of Licensed Network Devices ^[1]	10	250	500	700
Number of FortiClient Devices.....	100	2500	5000	5000
Number of FortiMail Devices.....	50	100	200	200
10/100 Ethernet.....	4	0	0	0
10/100/1000 Ethernet.....	0	4	2	2
Number of Hard Drives.....	1	4	6	12
Total Hard Drive Capacity.....	250.0 GB	2.0 TB	3.0 TB	6.0 TB
RAID Storage Management.....	No	Yes (0, 1, 5)	Yes (0, 1, 5, 10, 50)	Yes (0, 1, 5, 10, 50)
Redundant Hot Swap Power Supplies.....	No	No	Yes	Yes
Dimensions (H, W, L).....	2.0 x 13.3 x 6.8 in. (5 x 33.7 x 17.5 cm)	1.8 x 17.0 x 22.6 in. (4.5 x 43.0 x 57.5 cm)	3.5 x 17.5 x 29.0 in. (8.9 x 44.5 x 73.7 cm)	3.5 x 19.0 x 27.0 in. (8.9 x 48.3 x 68.6 cm)
Weight.....	4.4 lbs (2.0 kg)	20.0 lbs (9.1 kg)	63.0 lbs (28.6 kg)	68.0 lbs (30.8 kg)
Rack Mountable.....	No	Yes	Yes	Yes
Input Voltage.....	100-240VAC	100-240VAC	100-240VAC	100-240VAC
Input Current.....	0.8A	4A	9A	9A
Average Power Consumption.....	24W	195W	340W	432W
Operating Temperature.....			32 to 104 deg F (0 to 40 deg C)	
Storage Temperature.....			-13 to 158 deg F (-25 to 70 deg C)	
Humidity.....			5 to 95% non-condensing	
Regulatory.....			FCC Class A Part 15 / CE Mark	
Recommended FortiGate Models.....	FortiGate-30-110	FortiGate-30-1000	All Models	All Models

^[1] A licensed network device is defined as:

- One (1) FortiGate device without Virtual Domain (VDOM) mode enabled
- or One (1) VDOM if FortiGate device is running in multiple VDOM mode
- or One (1) Third-party SYSLOG compatible device

FortiAnalyzer Logging and Reporting Features

FortiAnalyzer supports the following logging, reporting and analysis features:

- Log Aggregation & Archiving**
 Analyze logs from multiple devices, by user, or by group of users, and generate a variety of reports that enable you to proactively secure networks as threats arise, avoid network abuses, manage bandwidth, monitor Web site visits, and ensure appropriate usage policies.
- Data Mining, Trend and Forensic Analysis**
 Archived content is data mined to report on types of traffic on your networks as well as actual content of data transferred in Web, FTP, email and IM traffic. Security event summaries identify unwanted traffic in the network and the top traffic producers, while traffic summaries identify the type of traffic on your network. Reports identify high volume users, information leakage events and acceptable use policy violations.

 The forensic analysis tools available within the FortiAnalyzer interface enable administrators to analyze archived content to track user activities by username, email address, or IM name. The FortiAnalyzer system supports FortiGuard® Web filtering reports to analyze Web site access and blocked Web sites on a per user basis.
- Central Quarantine**
 For FortiGate systems that do not have a hard disk, the FortiAnalyzer offers the ability to quarantine infected or suspicious files entering your network environment. A quarantine browser allows you to view the files to determine whether they are dangerous or not.
- Log Browser**
 Log Browser enables you to view any log file or messages from registered devices. All log files and messages are searchable and can be filtered to drill down and locate specific information.
- Real-Time Log Viewer**
 Real-time display of information allows you to follow real-time trends in network usage such as the source IP address and the destination URL for HTTP traffic or IM message traffic.
- Network Analyzer**
 The integrated network analysis tool allows any available interface on the FortiAnalyzer to be used to monitor traffic on a segment of network. The FortiAnalyzer network analyzer functions much like a packet capture device to capture traffic data, save it to the FortiAnalyzer hard disk and display the data for analysis.
- Vulnerability Scanner**
 The integrated vulnerability scanner identifies vulnerabilities on a host or server, such as a mail server, FTP server or other UNIX or Windows host and generates vulnerability reports showing potential weaknesses to attacks that may exist for a selected device.

GRAPHICAL REPORTING

FortiAnalyzer systems empower the network or security administrator with the knowledge needed to secure their networks through a comprehensive suite of standard graphical reports and the total flexibility to customize custom reports. Network knowledge can be archived, filtered and mined for compliance or historical analysis purposes.

REAL-TIME LOG VIEWER

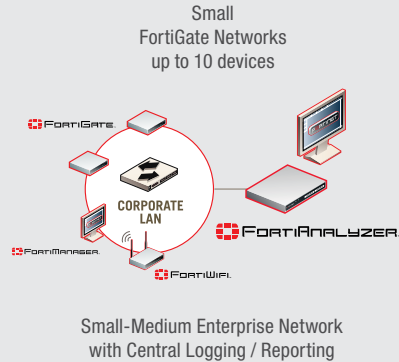

The ability to monitor network, traffic and user events in real-time or browse historical for specific events provides powerful insight into network security threats, performance and user behavior.

GRANULAR INFORMATION

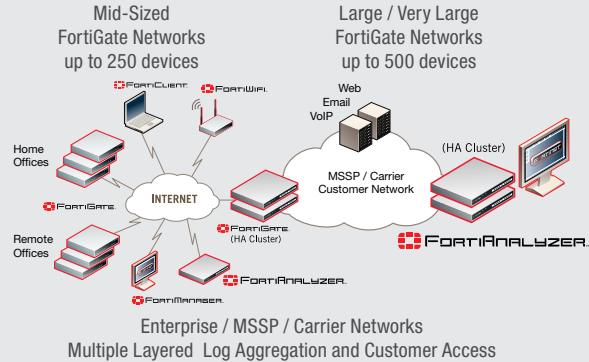

The FortiAnalyzer User Interface (UI) enables administrators to drill deep within security log data to provide the granular level of reporting necessary to understand what is happening on your network. Historical or real-time views allow administrators to analyze log and content information, as well as network traffic. The advanced forensic analysis tools allow the administrator to track user activities to the content level.

TYPICAL APPLICATIONS

FortiAnalyzer-100B

FortiAnalyzer-800B

FortiAnalyzer-2000A

FortiAnalyzer-4000A

Large / Very Large FortiGate Networks up to 500 devices

All FortiAnalyzer models provide the following features

GENERAL SYSTEM FUNCTIONS

- Profile-Based Administration
- Secure Web Based User Interface Encrypted Communication & Authentication Between FortiAnalyzer Server and FortiGate Devices
- Mail Server Alert Output
- Connect / Sync FortiAnalyzer
- SNMP Traps
- Syslog Server Support
- RAID Configurations
- Change / View RAID Level
- Support For Network Attached Storage (NAS)
- Launch Management Modules
- Launch Administration Console
- Configure Basic System Settings
- Online Help
- Add/Change/Delete a FortiGate Device
- View Device Groups
- View Blocked Devices
- View Alerts / Alert Events
- Alert Message Console
- View FortiManager Connection Status
- View System Information / Resources
- View License Information
- View Statistics
- View Operational History
- View Session Information
- Backup / Restore
- Restore Factory Default System Settings
- Format Log Disks
- Change the Firmware
- Change the Host Name

NETWORK ANALYZER

- Real-Time Traffic Viewer
- Historical Traffic Viewer
- Customizable Traffic Analyzer Log
- Search Network Traffic Logs

CENTRAL QUARANTINE

- Configure Quarantine Settings
- View Quarantined Files List

LOG ANALYSIS & REPORTING

- View/Search/Manage Logs
- Automatic Log Watch
- Profile-Based Reporting
- Over 300 Predefined Reports
- Example Reports Include:
 - Attacks: By FortiGate Unit, by Hour Of The Day, by Category, and by Top Sources
 - Viruses: Top Viruses Detected, Viruses Detected by Protocol
 - Events: By Firewall, Overall Events Triggered, Security Events Triggered, & Events Triggered by Day of Week
 - Mail Usage: Top Mail Users by Inbound and Outbound Web Usage Reports
 - Web Usage: Top Web Users, Top Blocked Sites, and Top Client Attempts to Blocked Sites
 - Bandwidth Usage: Top Bandwidth Users, Bandwidth by Day and by Hour, and Bandwidth Usage by Protocol Family
 - Protocols: Top Protocols Used, Top FTP Users, & Top Telnet Users
- Log Aggregation to Centralized FortiAnalyzer
- FortiClient Specific Reports

FORENSIC ANALYSIS

- Track User Activities by Username, Email Address, or IM Name
- Supports FortiGuard Web Filtering Reports to Show Web Site Access And Blocked Web Sites Per User
- Configurable Report Parameters including:
 - Profiles
 - Devices
 - Scope
 - Types
 - Format
 - Schedule
 - Output
- Customized Report Output
- Reports on Demand
- Report Browsing

CONTENT ARCHIVING / DATA MINING

- All Functions of Log Analysis & Reporting
- View by Traffic Type
- View Content Including:
 - HTTP (Web URLs)
 - FTP (Filenames)
 - Email (Text)
 - Instant Messaging (Text)
- View Security Event Summaries
- View Traffic Summaries
- View Top Traffic Producers

LOG BROWSER AND REAL-TIME LOG VIEWER

- Real-Time Log Viewer
- Historical Log Viewer
- Customized Log Views
- Log Filtering
- Log Search
- Log Rolling
- Top Users
- View Web Traffic
- View Email Traffic
- View FTP Traffic
- View Instant Messaging and P2P Traffic
- Filter Traffic Summaries
- Device Summary
- Traffic Reports Including:
 - Event (Admin Auditing)
 - Viruses Detected
 - Attack (IPS Attacks)
 - Web Content Filtering
 - Email Filtering
 - Content (Web, Email, IM)

VULNERABILITY SCANNER

- Configure Vulnerability Scan Jobs
- Run Vulnerability Scan Jobs
- View Summary Reports
- View Detailed Reports

Supported Devices

- FortiGate Multi-Threat Security Systems
- FortiMail Email Security Systems
- FortiClient Mobile End-Point Security
- FortiClient PC End-Point Security
- FortiManager Centralized Management
- Any Syslog-Compatible Device

FortiCare™ Support Services

- 24 x 7 x 365 FortiCare Web Service ^[1]
- 8x5 Telephone-based Technical Support ^[2]
- 1-Year Limited Hardware Warranty
- 90-Day Limited Software Warranty

^[1] Annual renewal required to maintain service

^[2] 24 x 7 Telephone Technical Support available.
